(54) Title: CONFIGURABLE PROFILING OF DATA

(57) Abstract: A method of ~~configurably~~ profiling data uses system (10) comprising a pre-processor (16), a profiler (18), a post-processor (20) and database (24). The pre-processor receives data and feedback data and performs configurable first calculations thereon to create data relating to profiling features. The profiler summarises the profiling features data over a length of time by performing configurable second calculations thereon to create summarised data relating to profiled features. The post-processor performs configurable third calculations the profiled features data to create the feedback data (22) and a profiled output data stream (14) for further processing.
